Daniel Arnold

SKILLS

- Mathematical: nonlinear and adaptive control, convex optimization, black-box optimization, time series analysis, state estimation, machine learning, optimal control, reinforcement learning, signal processing
- Software: python (pandas, sklearn, matplotlib, tensorflow, cvxpy, statsmodels, elasticsearch, beautifulsoup), matlab (cvx), OpenDSS, GridLAB-D
- Communication & Interpersonal Skills: authoring academic papers and technical reports, crafting and giving presentations to stakeholders and project sponsors, mentoring staff, leading research projects, fundraising

EXPERIENCE

Lawrence Berkeley National Laboratory, Berkeley, Ca. — *Research Scientist*

July 2017 - PRESENT

- Develop optimization and control algorithms to integrate distributed energy resources into electric power distribution grids
- Apply data analytics and machine learning techniques to gain insight from electric power distribution grid synchrophasor data
- Apply reinforcement learning algorithms to control distributed energy resources to mitigate cyber attacks on distribution grids

Civil and Environmental Engineering Dept., UC Berkeley, Berkeley, Ca. — *Lecturer*

Jan. 2018 - PRESENT

- CE 295 (Spring 2021) - Data Science for Energy (https://ecal.berkeley.edu/ce295.html)
    - Introduces data science fundamentals and programming techniques to graduate and upper division students
    - Course content includes: dynamic systems modeling, state estimation, convex optimization, machine learning, and optimal control
- CE 191 (2018 - 2020) - Engineering Systems Analysis (https://ecal.berkeley.edu/ce191.html)
    - Introduces optimization fundamentals and programming techniques to graduate and upper division undergraduate students
    - Course content includes: linear programming, quadratic programming, mixed integer programming, nonlinear programming, search algorithms, and dynamic programming

Lawrence Berkeley National Laboratory, Berkeley, Ca. — *ITRI-Rosenfeld Postdoctoral Fellow*

Jan. 2016 - July 2017

- Develop data analysis pipeline for clustering and regression analysis of electric power distribution grid synchrophasor data
- Develop model-free optimization algorithms for real-time control of distributed energy resources

EDUCATION

U.C. Berkeley, Berkeley, Ca. — *Ph.D Mechanical Engineering*

Sept. 2009 - Dec. 2015
Advisors: Duncan Callaway and David Auslander
Dissertation: Extremum Seeking Control of Distributed Energy Resources

U.C. San Diego, San Diego, Ca. — *M.S. Mechanical Engineering*

Sept. 2005 - Dec. 2006
Advisor: Miroslav Krstic

U.C. San Diego, San Diego, Ca. — *B.S. Mechanical Engineering (cum laude)*

Sept. 2005 - Dec. 2006

RELEVANT PROJECTS

Supervisory Parameter Adjustment for Distribution Energy Storage (SPADES) — *$3,000,000 award*

- Sponsor: Cyber Security and Energy Delivery Systems (CEDS) program, U.S. Department of Energy
- Objective: Creation of reinforcement learning-based controllers to manage battery storage systems to counteract cyber attacks on the electric grid.
- Role: Principal Investigator, responsible for overall research and management of project, developed software module to represent dynamic behavior of storage devices, development of reinforcement learning algorithm

Cybersecurity via Inverter-Grid Automatic Reconfiguration (CIGAR) — *$2,500,000 award*

- Sponsor: Cyber Security and Energy Delivery Systems (CEDS) program, U.S. Department of Energy
- Objective: Creation of reinforcement learning-based controllers to manage rooftop solar panels to counteract cyber attacks on the electric grid
- Role: co-Principal Investigator, responsible for overall research and management of project, developed software module to represent dynamic behavior of photovoltaic smart inverter autonomous control functions, development of reinforcement learning algorithm
